

# An assessment of specific patterns of the Montenegrin EFPs

Antonio Sanchez
Country Desk
DG ECFIN, European Commission

### What we check:

- 1. Date of transmission
- **2.** Compliance of content, form (clear and concise) and data
- 3. <u>Usefulness</u> for economic policy
- 4. Plausibility of macroeconomic outlook

#### What we check:

- 5. Link between macroeconomic scenario and EFP objectives
- 6. Identification of **risks**: Macro, Fiscal, Structural Reforms
- 7. Long-term **sustainability** of public finances
- 8. Adequacy of the <u>structural reform agenda</u>, <u>impact</u> on the budget and <u>timeframe</u>

#### **Comments:**

- **1. Date** of transmission
  - Montenegro complied systematically in all 4 programmes
  - However, delays may be expected in case of: elections or major "recent" budget rebalancing
- **2. Compliance** of content, form and data
  - Content coverage and form varies widely according to secctions;
    - => Need for one final editor / quality supervisor
  - Data coverage remains weak
     => Avoid empty tables as well as data discrepancies

### 3. <u>Usefulness</u> for economic policy

- -- adoption by the government,
  - -- accompanies annual budget,
  - -- reference to national strategies...

### 4. Plausibility of macroeconomic outlook

- Montenegrin estimates are rather prudent
   (as confirmed by later release of official data)
   => Check Divergence from previous EFP submissions!
- The introduction of <u>alternative scenarios</u> enhances credibility and indicates committment

#### **5. Link** macroeconomic scenario and EFP objectives

Fiscal policy anchors were very well defined:

"Establishing of a sustainable public finance system through defining of fiscal "anchors" and rules. The main fiscal anchors in the period until 2012 that are included in the "base scenario" are: reduction of the current expenditures and state debt below 35%; balanced budget in 2012; restraining of the growth of the wage and subsidy fund through concurrent reduction of the share of mandatory costs; constant capital budget at the level of around 3.5% GDP and possibility of capital project financing through public private partnership models; structural revenues should cover the current spending and at least 50% of the capital budget, while after the stabilization of the economic situation the budget balance should have surplus at the level of about 2% GDP. In this way, the current public spending would move to the level of about 30% GDP after 2012, while the debt would move below this level. " (EFP 2010, pp. 40-41)

 However, they were not implemented in the past, nor reflected in MTF (e.g. primary surplus).

#### 6. Identification of **risks**: Macro, Fiscal, Structural Reforms

- One of the best parts of the programme
- Very good table in 2010 submission
  - => Just need a <u>budget estimate!</u>

| Risks                            | Risk taking or not taking place in 2009  | Assessment of risk taking or not taking place in 2010   |  |  |  |
|----------------------------------|--|---|--|--|--|
|                                  |  | "Base Scenario"   | "Crisis Scenario"                                  |  |  |
| Stagnation or further drop in    | Yes  | No  | Yes  |  |  |
| turnover in the real estate      | Drop in real estate prices in 2009 was 20.4%   | Real estate prices are stagnating or having a mild  | Real estate prices are                             |  |  |
| market                           |  | growth of up to 5% annually   | dropping up to 5% annually                         |  |  |
| Further deepening of the crisis  | Yes  | No  | Yes  |  |  |
| in countries – trade partners of | Based on preliminary data, the most important import and   | Stagnation and mild recovery of the economic growth in  | Further decline of the                             |  |  |
| Montenegro                       | export markets are having negative economic growth   | EU and CEFTA countries in accordance with the IMF   | economic activity in EU and                        |  |  |
|                                  | results accompanied with the sizeable drop in aggregate demand and private consumption                     | forecast (Regional Economic Outlook, October 2009) and EBRD forecast (World Economic Outlook, October | CEFTA member countries                             |  |  |
|                                  | demand and private consumption   | 2009).  |  |  |  |
| Further decline in industrial    | Yes  | No  | Yes  |  |  |

|                                  | processing industry – KAP, caused a drop in processing   | takes place, a problem with KAP is resolved and   | steel prices, and national                         |  |  |
|                                  | industry of 36.6%, while in the mining and quarrying sector the drop was 64.5%. Reason for such decline is | production is growing.  | companies being large exporters have a slow regain |  |  |
|                                  | mainly a consequence of the reduced production in the  |   | of markets lost in 2009. Late                      |  |  |
|                                  | sub-sector of other mining and quarrying by 79.4%,   |   | resolution of the excess                           |  |  |
|                                  | whereby the ore mining reduction of 91.1% was the one  |   | employees' problem in KAP,                         |  |  |
|                                  | with the highest contribution in terms of the production   |   | production starts only in the                      |  |  |
|                                  | decline. Insignificant drop in electric power generation,  |   | second half of 2010.                               |  |  |
|                                  | gas and water of 1.9% is due to the reconstruction of  |   | (550,0010, 01,00)                                  |  |  |
|                                  | production capacities.   |   | (EFP 2010 pp. 24-26)                               |  |  |

### 7. Long-term **sustainability** of public finances

- => Complete some fields!
- at least gross estimations for the major items
- (e.g. number of retired people in t, t+1 and t+2 x average pension)
- fine tunning in next exercises
- Until now, projections are based in GDP growth simply extrapolated to fiscal items

### Table 7: Long-term sustainability of public finances

Percentages of GDP

Total expenditure

of which:

- Age-related expenditures

#### - Pension expenditure

- Social security pension
- Old-age and early pensions
- Other pensions (disability, survivors)
- Occupational pensions (if in general government)

#### - Health care

- Long-term care (this was earlier included in the health care)

#### **Education expenditure**

Other age-related expenditures

#### **Interest expenditure**

- 8. Adequacy of the <u>structural reform agenda</u>, <u>impact</u> on the budget + <u>timeframe</u>
  - The structural framework is quite extensive
    - => it should focus on ongoing and future reforms
    - => Not too detailed (e.g. transport infrastructure)
    - => Insert systematically the « *Slovenian table* » after describing each measure.

| Effect of measures on the budget               |     |   |     |     |
|--|-----|---|-----|-----|
|  |     |   |     |     |
| EUR millions                                   | t-1 | t | t+1 | t+2 |
| Net effect on budget                           |     |   |     |     |
| <ol> <li>Effect on budget revenue</li> </ol>   |     |   |     |     |
| <ol><li>Effect on budget expenditure</li></ol> |     |   |     |     |

# **TIP**: listing the structural reforms tables will serve to fill Table 8. « Matrix of Policy Commitments"!

| Matrix of Policy Commitments                          |      |      |      |      |  |  |  |
