Within DQIM project a one-day **workshop on WTO/TBT notification procedures** took place in the conference hall of the Bureau of Metrology of Montenegro on 17 October 2013.

The event was conducted by **Mr. Christer Arvius**, an experienced Swedish expert working in the *National Board of Trade* located in Stockholm. Attendees were representatives of line ministries, other relevant governmental institutions and ISME (Standards body of MNE).

The **main aim** of the workshop was to convey knowledge and experience for designing and implementing the necessary procedures for notification of draft technical regulations and Enquiry Point management (providing information on valid legislation to interested parties) in order to enable Montenegro to meet its obligations under WTO/TBT Agreement.

The workshop was divided into two parts, one with **presentation of the WTO/TBT and EU systems on notification** with practical examples on how to operate these systems, and another one with discussion on the “**Roadmap**” with activities needed to build up MN systems on notifications and Enquiry Point according to the WTO/TBT Agreement.

Materials from the workshop can be downloaded [here](#).

An EU funded project
