## STANOVNIŠTVO

**Podaci o stanovništvu** prikupljeni su u popisima sprovedenim od 1921. - 2003.godine. Pri korišćenju popisnih rezultata, treba voditi računa o tome da ne postoji potpuna uporedivost definicija stalnog, odnosno ukupnog stanovništva u popisu 2003.i ranijim popisima. Naime,u popisima 1971 - 1991.godine pored stanovništva u zemlji u stalno stanovništvo su ubrajani i crnogorski građani na privremenom radu u inostranstvu, kao i članovi koji su s njima boravili u inostranstvu.U skladu s međunarodnim preporukama,u popisu 2003. godine, osim stanovništva u zemlji, u sastav stalnog stanovništva ulaze crnogorski građani čiji je rad, odno-no boravak u inostranstvu kraći od godinu dana, kao i strani državljani koji u našoj Republici rade ili borave u svojstvu članova porodice duže od godinu dana.

**Stanovništvo prema polu** i starosti predstavlja broj lica određenog pola, grupisanih po starosti, prema navršenim godinama života. U tabeli je prikazana starosno - polna struktura preko apsolutnih frekvencija i / ili preko procentualne distribucije.

Godišnje procjene broja stanovnika se računaju na osnovu popisnih rezultata i redovnih statističkih istraživanja o umrlima, rođenjima i unutrašnjim migracijama stanovništva.

**Podaci o bračnom stanju** prikazani su za stanovništvo staro 15 i više godina, I odnose se na formalno-pravni status lica ( zakonsko bračno stanje ), a ne na faktičko stanje u okviru porodičnih zajednica.

**Podaci o nacionalnoj ili etničkoj pripadnosti** rezultat su slobodnog izjašnjavanja stanovnika, odnosno roditelja, usvojlaca ili staratelja kada su u pitanju djeca mlađa od 15 godina.

## ZDRAVLJE

**Statistika rođenih** obuhvata svu djecu rođenu u posmatranoj godini ( živorođenu i mrtvorodenu). Živorodnim djetetom smatra se dijete koje je,po rođenju, pokazivalo znake života (disanje i kucanje srca) makar i za najkraće vrijeme,bez obzira na trajanje trudnoće majke. Mrtvorodnim smatra se ono dijete koje je rođeno bez ikakvih znakova života, pod uslovom da je nošeno duže od 28 nedjelja.

**Statistika umiranja (mortaliteta)** obuhvata svaki slučaj smrti.Šifriranje i agregiranje podataka o osnovnom uzroku smrti vrši se prema Međunarodnoj klasifikaciji bolesti, X revizija (MKB - 10).

**Umrli prema vodećim uzrocima smrti** predstavlja broj umrlih lica čiji je uzrok smrti najfrekventniji.

**Specifična stopa fertiliteta** za žene uzrasta 15 - 19 godina predstavlja odnos broja djece čije su majke navedene starosti na 1000 žena te starosti u ukupnoj populaciji.

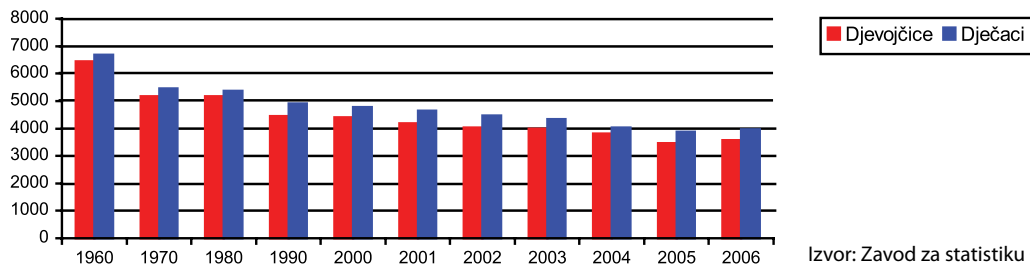

**Stopa maternalne smrtnosti** predstavlja broj žena umrlih u trudnoći, na porođaju ili u babinjama, zbog uzroka povezanih sa ovim stanjima, tokom kalendarske godine, a na 100000 živorođenih.

## POPULATION

**Data on the number of inhabitants** were collected in censuses conducted from 1921 to 2003. When using census results, it should be noted that there is no complete comparison of definitions of permanent, i.e., total population in Population Census 2003 with earlier censuses. In censuses 1971 – 1991, besides the population in the country, the citizens that lived or worked abroad were also included in the permanent population. In compliance with International recommendations, the Population census 2003, except the population in the country, included citizens of Montenegro who worked or lived shorter than a year, as well as foreign citizens who either worked or lived in our country for more than a year.

**The population by sex and age** represents the number of persons of a particular sex, grouped by age. The table shows the age-sex structure through absolute frequencies and/or percentage distribution.

Annual population estimates are calculated on the basis of Census results and regular statistical surveys on deaths, births and internal population migrations.

**Data on marital status** are shown for the population aged 15 and above, and refer to the legal status of a person (legal marital status), and not to the factual state within family units.

**Data on national or ethnic affiliation** are obtained on the basis of free declaration of inhabitants or their parents, foster parents or guardians for children aged 15 or under.

## HEALTH

**The statistics of born children** includes all children born in the observed year (both liveborn and stillborn children). A liveborn baby is the one who, at birth, showed the signs of life (breathing, normal heart function) even for a short period, no matter how much mother's pregnancy lasted. A stillborn baby is the one which showed no signs of life, providing that it was carried longer than 28 weeks.

**The statistics of deaths (mortality)** includes all cases of death. Coding and aggregation of data on the primary cause of death is done according to the International Classification of Illnesses, Revision X (MKB - 10).

**Deaths by main causes of deaths** represent the number of death persons whose cause of death is the most frequent one.

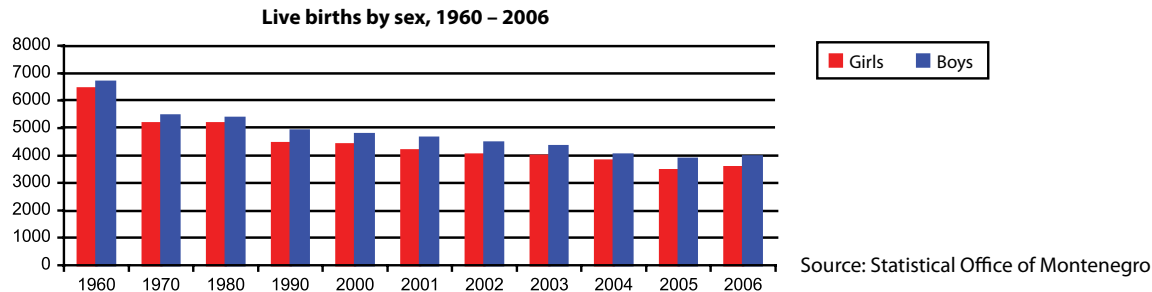

**The specific fertility rate** for women aged between 15 and 19 represents the number of children whose mothers are of the mentioned age, per 1000 women aged 15-19 in the whole population.

**The maternal mortality rate** represents the number of women who died during pregnancy, at delivery, and in the first forty days after delivery, due to causes connected with these conditions, during the calendar year, per 100000 liveborn children.
