2. TEKSTUALNA DOKUMENTACIJA

2.1. Tehnički opis

○ Opšte

Ovim projektom je predviđena izgradnja sportsko – rekreativnog parka pod Trebjesom, u Nikšiću.

○ Konstrukcija

Izgradnja parka podrazumijeva izgradnju sportskih terena i to: teren za tenis i padel, teren za mali fudbal, teren za odbojku, košarku, badminton, teretana na otvorenom, skate park, teren za boćanje, igralište za djecu, stijena za penjanje, kao i staze za rekreaciju i šetne staze.

Što se tiče konstruktivnih elemenata, čine ih armirano-betonske ploče ispod svih terena debljine 10cm, temeljne trake dimenzija 65x25cm i temeljne grede širine 25cm dok im je visina promjenljiva. Okolo terena je predviđeno postavljanje čeličnih mrežastih ograda. Ploče ispod terena su armirane jednom zonom armature Q-335.

U sklopu terena za skate park, planirana je stijena za penjanje za čiju montažu je neophodan armirano – betonski zid visine cca 5,0m.

U sklopu terena su predviđene armirano-betonske tribine, strepeništa i ostale dodatne pozicije naznačene u grafičkoj dokumentaciji.

Kako se konstrukcija sastoji od trakastih temelja i temeljnih greda koje imaju ulogu zidova na koje se postavlja čelična ograda, nije bilo potrebe da posebnim statičkim proračunom.

○ Primijenjeni materijali

Za elemente od armiranog betona predviđeno je:

- Marka betona C25/30
- Rebrasta armatura od B500B
- Mrežasta armatura od MA 500/600

○ Način izvođenja

Ovim tehničkim opisom dati su opšti uslovi i način izvođenja osnovnih pozicija radova koji se odnose na konstruktivni dio objekta.

○ Zemljani radovi

Zbog specifičnosti lokacije i nagiba terena, na pojedinim mjestima će biti izvršen iskop dok će na drugim biti neophodno nasipanje tla. Zbijenost tla je potrebno ispitati i izvršiti zamjenu tla ako je zbijenost nezadovoljavajuća. Iskop zemljanog materijala za temelje objekta treba vršiti prema projektu koristeći pogodnu mehanizaciju. Dno iskopane površine treba da je ravno i horizontalno, a ivice oštre i vertikalne. Izvođač je dužan da otkopane površine zaštititi od eventualnog odronjavanja i obezbijedi odronjavanje oborinskih voda, a vodu sa otkopanih površina odstrani što prije.

Tampon sloj koji se postavlja ispod svih temeljnih traka i terena je potrebno dobro nabiti do postignute stišljivosti od 45Mpa.

○ Betonski radovi

Pri izradi betonskih i AB elemenata treba se pridržavati uslova i odredbi koje propisuju Pravilnik o tehničkim mjerama i uslovima za beton i armirani beton.

Beton se smije proizvoditi iz prethodno ispitanih, te tokom vremena vizuelno i mjerenjem kontrolisanih osnovnih materijala.

Uzimanje uzoraka u svrhu dobijanja uvjerenja o kvalitetu, obavlja ovlašćena organizacije ili izvođač pod kontrolom nadzornog organa.

Sve ova dokaze izvođač je dužan pribaviti blagovremeno, kako se materijali dopremaju na gradilište i ugrađuju i sve ovo je dužan blagovremeno saopštavati nadzornom organu.

Sastav svježeg betona definisan je markom betona. Svježi beton ne smije biti sklon segregaciji. Sav beton mora biti dobro i jednoliko sabijen pogodnim pervibratorom, kako bi se spriječilo stvaranje gnijezda, odnosno bilo kakvih slabih mjesta. Kod vibriranja jednog sloja betona koji dolazi na prethodni sloj koji još nije vezao pervibratori moraju ući i u donji sloj betona za dubinu igle.

Beton u konstrukciju (oplatu) treba ubacivati što bliže njegovom konačnom položaju da bi se izbjegla segregacija. Od mjesta ubacivanja do konačnog položaja u konstrukciji beton može preći max 1,5 m.

Zaštita betona mora biti efikasno sprovedena već u prvim satima nakon ugradnje, odnosno čim stanje površine betona to dozvoljava. Intenzivna njega betona vlaženjem mora trajati minimum sedam dana. Za vrijeme vezivanja, odnosno učvršćivanja betona, beton se mora zaštititi od uticaja mraza u periodu od 28 dana.

Prije ugrađivanja betona, treba zaštititi sve otvore za instalacije u betoniranom elementu, kao i ugraditi sve vrste ankera za povezivanje i međusobno učvršćivanje elemenata konstrukcije.

Zaštitni sloj betona do armature treba obezbijediti na svim elementima prije ugrađivanja betona pomoću držača armature o odbojnika do oplata.

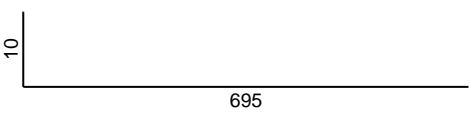

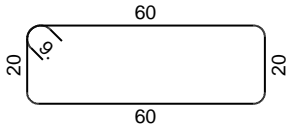

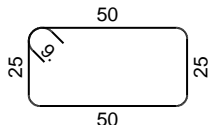

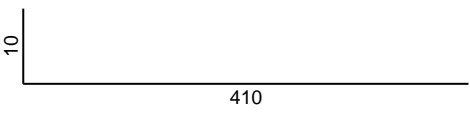

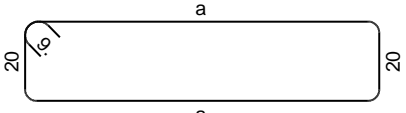

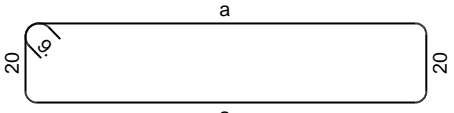

Armaturu treba fiksirati u položajima prema planovima armature da tokom betoniranja ne bi došlo do njenog pomjeranja.

Sastavi u oplati moraju dobro dihtovati tako da ne bi došlo do oticanja cementnog mlijeka tokom i neposredno nakon betoniranja elemenata.

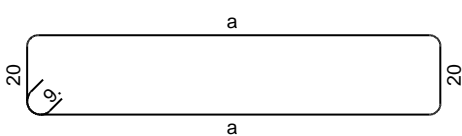

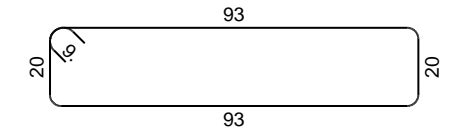

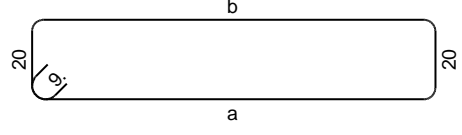

Oplata prilikom betoniranja ne smije betonu oduzimati vodu i smije biti skinuta sa betoniranog elementa minimum sedam dana nakon betoniranja ili duže u zavisnosti od vrste betona i tipa betoniranog elementa.
